Note: You don't have to create separate backups for databases, themes, plugins, and pages. Because by creating this backup you will get your website's entire files backup so it means you don't have to create anything separately.

3. Website restoration process: -

3.1 Repeat the same installation process over the new website and then click on import >> Then click on import from >> And you will be redirected to your file directory and select the downloaded Backup file. After uploading the backup file it would take few minutes depend upon your internet upload speed after it you'll get options like proceed button >> Then click on it after a few moments your website will be restored and then click refresh and log in the website with the previous login credentials.
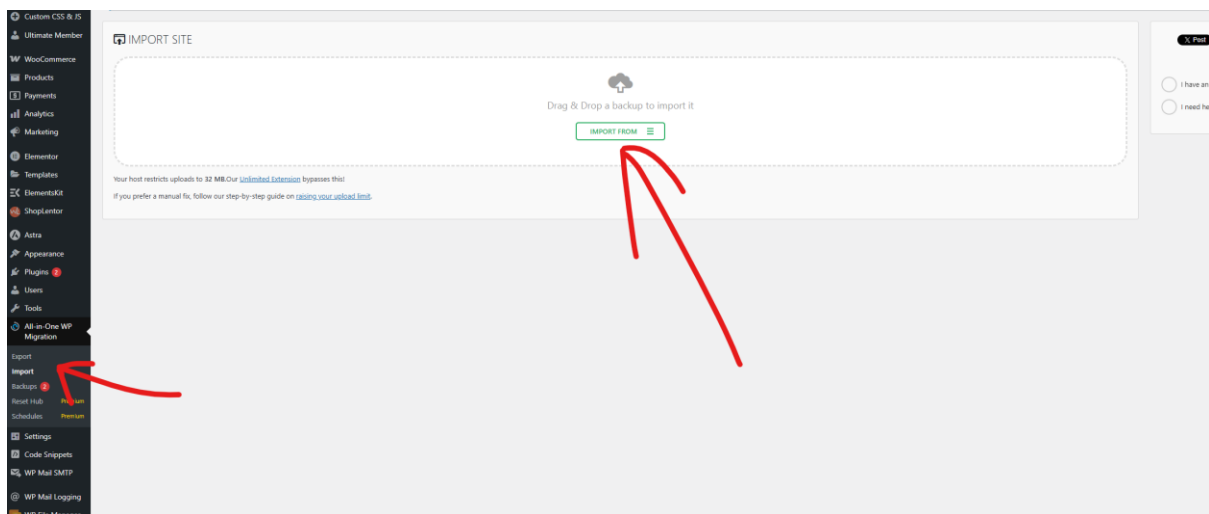

3.2 Website Page: -

3.2.1 Now lets talk about the website pages from where you can add new page and manage the existing pages, Suppose you would like to change something over the existing page then go to your wp dashboard >> Click on pages >> Then pick your desire customizable page suppose about page >> Then hover over the page and you will get the option like >> Edit with Elementor And then click on it after you will be redirected to the editor page from where you can manage the page design and change the text And maybe something else.
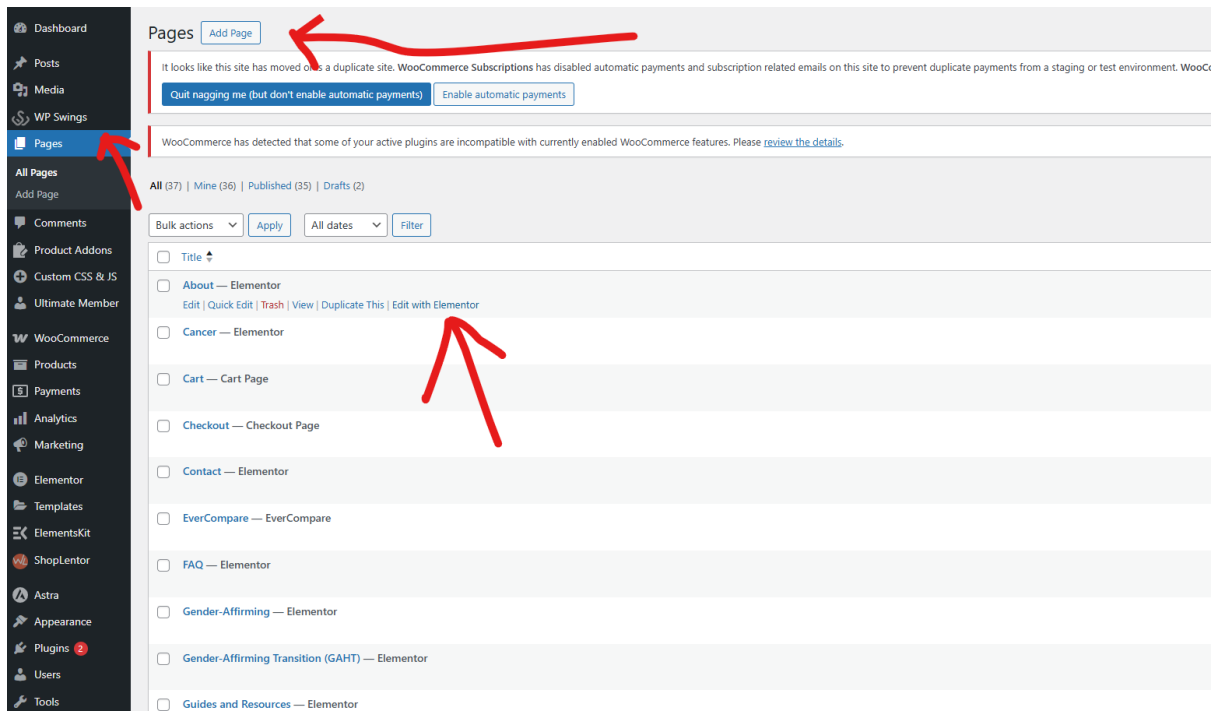

4. Website Posts -

4.1 There is another option posts which is used to write articles over the website now you have written the article and wants to add over the site then repeat the same above website page process but posts >> Then click on add new >> From here you can manage the post and after adding all the contents click on publish button.

Note: You don't have to create any kind of post design you only have to add the contents and titles over the post and make the changes and publish it that's it then post will appear over the post page whatever we have created.
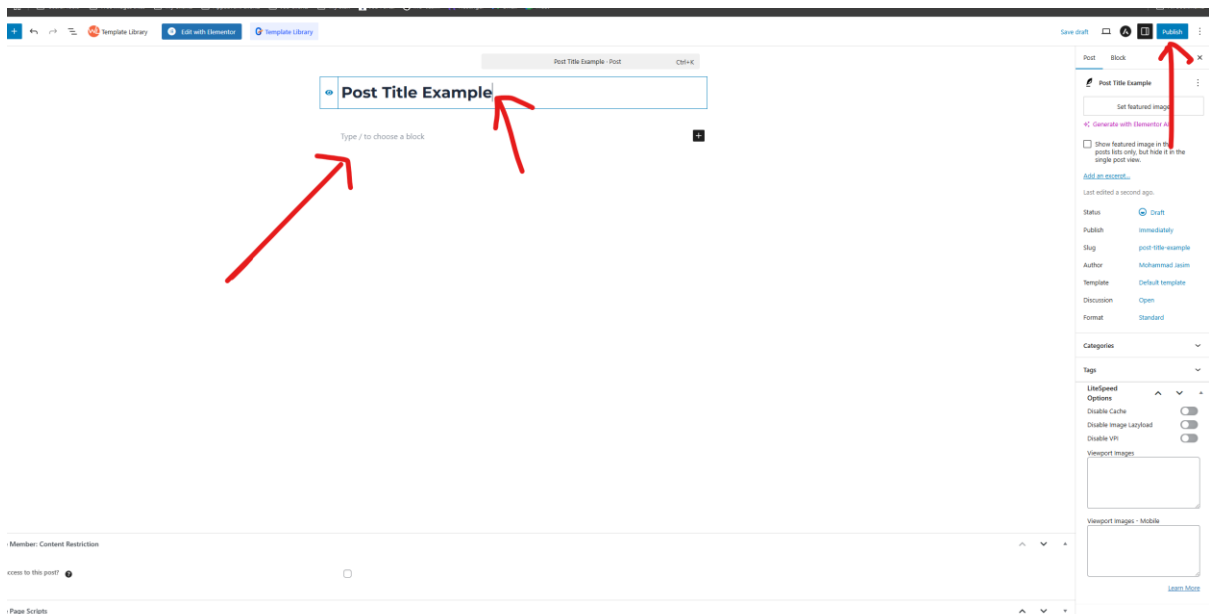

5. Website plugins which is installed and its use cases : -

5.1 Here is the explanation : -

1 All-in-One WP Migration
→ Lets you export/import your full site (files + database). Useful for backups or moving your site.

2 Duplicate Page
→ Easily duplicates posts/pages with one click. Handy for reusing layouts.

3 Elementor Pro
→ Premium page builder for designing custom layouts with extra widgets and theme building options.

4 Elementor
→ The core visual page builder plugin used to create site's pages with drag-and-drop.

5 ElementsKit Lite
→ Adds extra design widgets and header/footer builder features for Elementor.

6 Extra Product Options (Custom Product Addons) for WooCommerce
→ Lets you add more product options like text fields, dropdowns, etc. on WooCommerce product pages.

7 LiteSpeed Cache
→ Boosts website speed using caching and image optimization.

8 Payment Plugins for Stripe WooCommerce
→ Allows Stripe payments on your WooCommerce store.

9 Product Options for WooCommerce
→ Adds more flexible product fields (similar to Extra Product Options) directly to WooCommerce products.

9 ShopBuilder – WooCommerce Builder for Elementor & Gutenberg
→ Helps design WooCommerce pages (shop, cart, checkout) using Elementor or Gutenberg blocks.

10 Simple Custom CSS and JS
→ Lets you add custom CSS or JavaScript code without touching theme files.

11 Subscriptions For WooCommerce
→ Enables recurring payments/subscription model on WooCommerce products.

12 Ultimate Member
→ Adds user registration, profile, and member directory functionality.

13 UpdraftPlus – Backup/Restore
→ Backup plugin for saving or restoring your site (to Google Drive, Dropbox, etc.).

14 Wbcom Essential
→ Adds helpful features like widgets, tweaks, and extra settings for BuddyPress and Ultimate Member.

15 WooCommerce
→ The core plugin for setting up your online store.

16 WooCommerce Custom Product Addons Free
→ Free version of the product options plugin (text fields, radio buttons, etc.) for WooCommerce.

17 WooCommerce Membership

→ Lets you restrict content or sell memberships on your site.

18 WooCommerce Subscriptions

→ Official plugin for managing recurring subscription payments and billing cycles.

19 WP Mail SMTP

→ Helps fix email delivery issues by configuring proper email sending (via SMTP).

**20 WPvivid Backup Plugin**

→ Another backup plugin with migration features and scheduled backups.

21 WPS Hide Login

→ Changes the default WordPress login URL to a custom one for better security.

6. Website user roles: -

Let's see how many users have registered over the website just go to wp dashboard and scroll down On the left hand side there will be an option users just click on it >> Then user list will pop up Where you can see all users types such as administrators customers.
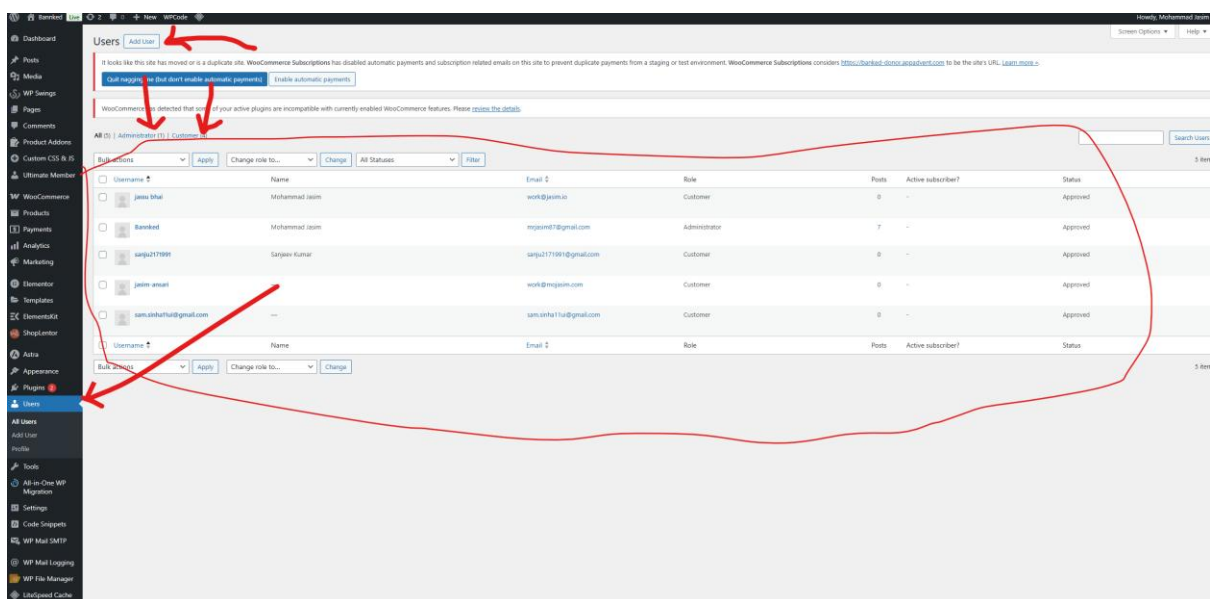

6.1 Suppose if you want to add another administrator to access the website then click on add new >> Select User role type >> then add necessary details.

Add User

Create a brand new user and add them to this site.
